PROFESSIONAL SUMMARY

Oracle-certified NetSuite Developer with 3+ years of software engineering experience spanning ERP development, system integration, and quality assurance, including 2.5+ years dedicated to NetSuite. Holder of 7 Oracle NetSuite certifications across AI, BI, Financials, and Accounting. Specialized in SuiteScript 2.0/2.1 (User Event, Suitelet, Map/Reduce, Scheduled, and Client scripts), SuiteQL, Saved Searches, Workflows, and Advanced PDF/HTML Templates with FreeMarker. Proven record designing secure REST API integrations with OAuth 1.0/2.0 — including separate Claude AI and LibreChat integrations for conversational access to ERP data, and a real-time NetSuite-to-Supabase (PostgreSQL) sync feeding Power BI. QA background drives governance-aware, performance-tuned, production-reliable code for international clients in real estate, medical devices, and manufacturing.

TECHNICAL SKILLS

NetSuite Development: SuiteScript 2.0/2.1 (User Event, Suitelet, Client, Scheduled, Map/Reduce, RESTlet, Portlet), SuiteQL / N-query, Saved Searches, Workflows, Custom Records, Custom Segments, Governance Optimization

Integrations & APIs: REST APIs, RESTlets, Machine-to-Machine Integration, OAuth 1.0 / OAuth 2.0, Webhooks, Event-Driven Data Sync, Postman API Testing

Data & Analytics: Supabase (PostgreSQL), SQL & Data Modeling, Power BI, Saved Search Analytics, ETL / Backfill Pipelines

AI Integration: Claude API, LibreChat–NetSuite Bridge, AI-Assisted Development, Prompt Engineering

Documents & Templates: Advanced PDF/HTML Templates, FreeMarker, Transactional Document Automation (Invoices, Statements, Check Vouchers)

Programming & Tools: JavaScript (ES6+), HTML/CSS, React, Git, JIRA, Agile/Scrum

Quality Assurance: Functional & Regression Testing, Test Planning, Cross-Platform Testing (iOS/Android/Web), Defect Lifecycle Management

PROFESSIONAL EXPERIENCE

NetSuite Developer

February 2024 – Present

MaxDot AI Solutions — Lahore, Pakistan (international clients: real estate, medical devices, manufacturing)

- Delivered 10+ production NetSuite customizations using SuiteScript 2.0/2.1 — User Event, Suitelet, Client, Scheduled, and Map/Reduce scripts — aligned to client business requirements and governance limits.
- Engineered a 5-script line-level Credit Limit Approval suite (two Suitelets, two User Events, shared Client Script) enforcing finance sign-off before fulfillment, with partial-quantity line splitting and automated email notifications between Sales and Finance.
- Automated controlled Vendor Bill updates via a custom approval record and workflow: auto-sources 16+ fields from the linked bill, restricts approval actions by role, and writes approved changes back automatically — creating a fully auditable AP change pipeline.
- Built automated Customer Statement generation for a client using a Map/Reduce script and Advanced PDF/HTML Templates — statements produced per customer payment terms without manual effort.
- Integrated Claude AI directly with NetSuite: Claude API tool-use calls OAuth 2.0-secured RESTlets with SuiteQL-powered retrieval, enabling natural-language queries over live ERP data within permission scopes.
- Integrated the LibreChat AI platform with NetSuite as a separate machine-to-machine integration, giving teams a single chat interface over ERP operations through authenticated, governance-safe RESTlet endpoints.
- Developed a near real-time NetSuite → Supabase (PostgreSQL) data sync: User Event scripts propagate create/update/delete on customers, addresses, and custom records; a SuiteQL-driven Map/Reduce backfill reconciles history — powering downstream apps and Power BI reporting.

- Designed branded Advanced PDF/HTML Templates (invoices, sales orders, statements, check vouchers) with FreeMarker, including conditional logic and dynamic line-level tables.
- Optimized script performance and governance-unit usage; validated all endpoints with structured Postman test suites.

Software Quality Assurance Engineer

January 2023 – January 2024

Software Alliance — Lahore, Pakistan

- Executed functional and regression testing for web and mobile applications, validating releases across iOS, Android, and admin panels.
- Authored detailed test plans and test cases from business requirements; tracked and managed defects through the full lifecycle in JIRA.
- Verified bug fixes and performed systematic retesting, measurably improving product reliability across releases.

Software Engineer Intern

July 2022 – September 2022

Devsinc — Lahore, Pakistan

- Developed web application features with Ruby on Rails, collaborating with senior engineers on backend implementation in an Agile environment.

KEY PROJECTS

Sales Order Credit Limit Approval Suite — NetSuite (SuiteScript 2.1)

- Line-level approval workflow: Suitelet 1 lets Sales submit order lines with per-line quantities (auto-splitting partial submissions); Suitelet 2 lets Finance approve/reject credit per line; a User Event gate blocks Item Fulfillment until approval — with a complete auditable status trail.

Vendor Bill Update Request Automation — NetSuite (Custom Records + Workflow)

- Role-based, soft-locked approval pipeline for editing posted Vendor Bills; field-map design separates reference-only from write-back fields applied automatically on approval.

Automated Customer Statement Generation — NetSuite (Map/Reduce + FreeMarker)

- Scheduled Map/Reduce job generates customer statements by payment terms using Advanced PDF/HTML Templates, eliminating a recurring manual AR process for the client.

NetSuite ↔ Claude AI Integration — AI + ERP

- Direct Claude API integration with tool use: Claude invokes OAuth 2.0-secured RESTlets with SuiteQL-powered retrieval to answer natural-language questions over live ERP data — authenticated, permission-scoped, and governance-safe.

NetSuite ↔ LibreChat Platform Integration — AI + ERP

- Connected the LibreChat multi-model AI platform to NetSuite via machine-to-machine RESTlet endpoints, providing one secure chat interface for teams to work with ERP data.

NetSuite → Supabase Real-Time Data Sync — Integration Pipeline

- Event-driven upserts keyed on internal IDs with delete propagation and SuiteQL bulk backfill; keeps an external PostgreSQL mirror current for applications and Power BI dashboards.

Open Advisor — MERN-Stack Web Platform (Final Year Project)

- Networking and mentorship platform for entrepreneurs (MongoDB, Express, React, Node.js) with responsive Bootstrap UI and full use-case/test-case documentation.

CERTIFICATIONS — ORACLE NETSUITE (×7)

- Oracle NetSuite Certified Accounting Professional — December 2025
- Oracle NetSuite Certified Financial Planning & Analysis Professional — December 2025
- Oracle NetSuite Certified BI and Reporting Specialist — November 2025
- Oracle NetSuite Certified BI and Saved Searches Professional — November 2025
- Oracle NetSuite Certified Financial Associate — November 2025

- Oracle NetSuite Certified BI and Reporting Associate — October 2025
- Oracle NetSuite Certified AI Foundations Associate — October 2025

EDUCATION

MS Computer Science — COMSATS University Islamabad (Lahore Campus)	2025 – Present
BS Computer Science — University of Management and Technology, Lahore	2020 – 2024
